

## Radisson Mining Resources (RDS CN)

Mineralized Footprint at O'Brien Continues to Grow... High-Grade Intercepts at +1.2km VD

### Event

Today, before market open, RDS announced assay results from 15 drill holes that tested the Trend 0, 1, 2 & 3 targets (Fig 1) at its 100% owned O'Brien gold project, Cadillac Break, Quebec, Canada. True thicknesses are estimated at 30% to 80% of intersection length.

### RDS CN vs GDXJ (Rebased)

Source: S&P Capital IQ Pro.

### Impact – Positive

- **Footprint of drilling supports RDS's 3-4moz exploration target** – RDS completed deep step-outs 300m below its MRE footprint at its Trend #2 target area, yielding **8.4g/tAu over 2.2m incl 14.4g/tAu over 1.2m** as well as **9.1g/tAu over 1.8m** from 1,231m downhole in **hole 363** (Fig 2). We think RDS's deep drilling program will demonstrate the footprint of mineralization has +3mozAu endowment potential. At Trend #0, **hole 354** yielded **7.9g/tAu over 2.3m** and at Trend #1, **hole 364** returned **12.8g/tAu over 1.4m** and **11.2g/tAu over 1.5m**.
- **Expansion of mineralization in the Pontiac sediments** – RDS yielded solid grades that expand mineralization laterally to the south in the Pontiac sediments via i) **hole 371W1** delivering **5.7g/tAu over 3.0m** and **10.0g/tAu over 1.5m**; ii) **hole 363** returning **6.0g/tAu over 1.4m** and **7.7g/tAu over 1.0m**; and iii) **hole 352** yielding **13.1g/tAu over 1.0m**. Mineralization in the Pontiac sediments is not as pervasive as the Piche lithologies and LLCB shear zone; however, we think there is potential for zones of high-grade that could fit into a future UG mine plan.

### Key Catalysts

- **Exploration drilling** – 50-60km in 2025 & 2026 (ongoing)
- **Potential commercial agreement to develop O'Brien (2H25?)**
