

Radisson Mining Resources (RDS CN)

RDS Deep Drilling Extends Main Mine and Trend 1 to 1900m VD

Event

Today, before market open, RDS reported assay results for 16 drill holes at its 100% owned O'Brien gold project, Cadillac Break, Quebec, Canada. True thicknesses are estimated at 30-80% of drilled thicknesses.

RDS CN vs GDXJ (Rebased)

Source: S&P Capital IQ Pro.

Impact – Incremental Positive

- **Deepest hole ever drilled at O'Brien intersects high-grade Au at depth** – Drilling tested the extent of mineralization to a ~2km floor, intersecting high-grade mineralization within plunging, gold-bearing vein settings at a ~1.9km vertical depth. Highlight hole 384 (85° dip) returned **4.54g/tAu over 12.0m** from 1,944.0m downhole, including high-grade intercepts of **16.85g/tAu over 1.0m from 1,949.0m** downhole and **12.87m over 1.0m** from 1,955.0m downhole (Fig 1).
- **Main Mine and Trend 1 extended, potential for expansion remains** – Multiple drill holes intersected mineralization beyond the previously identified resource blocks (Fig 2). Further infill and step-out drilling in the ongoing 140km program is needed to determine continuity and extent of mineralized system at depth – we note the historic O'Brien mine produced +0.5mozAu mining ore veins with an average grade of +15g/tAu.

Key Catalysts

- **Exploration drilling** – 140km program (ongoing)
- **Potential commercial agreement to develop O'Brien (2H26?)**
